PROFESSIONAL SUMMARY

Results-driven Software Development Engineer in Test (SDET) with 2.5+ years of experience designing scalable, low-code automation frameworks with Selenium, Playwright, Cucumber, and REST Assured, plus data validation pipelines for enterprise applications. Skilled in Java, Python, SQL, and CI/CD-integrated testing, with a proven record of cutting regression cycles by 60% and accelerating defect detection. Adept at building maintainable, data-driven and keyword-driven test architectures in Agile environments.

TECHNICAL SKILLS

Languages: Java, Python, SQL, JavaScript, HTML, CSS

Test Automation: Selenium WebDriver, Playwright (Java), Cucumber (BDD), TestNG, JUnit, Page Object Model (POM), Data-Driven & Keyword-Driven Frameworks, Low-Code Framework Design, Cross-Browser Testing

API & Performance Testing: REST Assured, Postman, API Automation, JSON Schema Validation, JSON/XML Validation, JMeter (Basics)

CI/CD, DevOps & Tools: GitHub Actions, Jenkins, Git, Maven, Docker (Basics), JIRA, Confluence, Extent/Allure & Cucumber Reporting

Data & Validation: Snowflake, SQL Query Optimization, Data Reconciliation, ETL Validation, File Parsing (CSV/TXT/JSON/XML)

Practices & Emerging Tech: Regression & Smoke Suites, Test Design & Planning, Defect Lifecycle, Agile/Scrum, Code Review, AI-Assisted Test Generation, BrowserStack (Cloud Testing)

EXPERIENCE

Associate Software Engineer (Automation / SDET)

Carelon Global Solutions

December 2023 – Present
Gurugram, Haryana, India

- Architected and enhanced Selenium WebDriver automation suites for critical web workflows, **reducing manual regression effort by 60%** and accelerating release readiness across multiple environments.
- Engineered reusable automation utilities (custom wait strategies, Page Object Model, data-driven runs), cutting flaky test failures and improving framework stability and maintainability.
- Developed end-to-end validation checks spanning UI and Snowflake-backed datasets, **improving defect detection speed** and preventing data-quality regressions in production releases.
- Optimized Snowflake queries and verification pipelines, **improving query performance by 40%** and reducing data processing costs.
- Integrated automated test execution into CI workflows, enabling faster feedback loops and consistent regression coverage on every build.
- Collaborated with developers, analysts, and QA in Agile sprints; led code reviews and ensured clean handoffs with clear, reproducible test evidence.

ARPA Intern (Automation & Data Extraction)

HighRadius

June 2022 – May 2023
Bhubaneswar, Odisha, India

- Built automation scripts to extract and normalize data from multiple formats (CSV, TXT, JSON, XML) using regex-based parsing, reducing manual data-handling time significantly.
- Developed web data-extraction utilities and scheduled automation runs to support downstream processing and reporting pipelines.
- Designed SQL-backed storage and queries for extracted data, enabling automated calculations, cross-checks, and faster reconciliation.
- Improved script reliability through structured logging, edge-case handling, and repeatable execution patterns, increasing overall automation robustness.

PROJECTS

Low-Code Hybrid API Testing Framework

Java, REST Assured, Cucumber (BDD), TestNG

- Built a low-code REST API automation framework combining Cucumber (BDD) with REST Assured, where API details (endpoint, method, headers, payload, expected results) are defined in external JSON config files looked up by key, so testers add new cases without writing Java.
- Designed a thin set of generic, reusable step definitions backed by request-executor and response-validator helper classes; supported status, body field, header, and JSON-schema validation plus response data-chaining across dependent requests, with Cucumber HTML reporting and GitHub Actions CI.

Low-Code Hybrid Playwright UI Testing Framework

Java, Playwright, Cucumber (BDD), TestNG

- Built a low-code UI automation framework pairing Cucumber (BDD) with Playwright for Java, where element locators and test data live in external JSON files referenced by logical names, enabling new tests via configuration rather than code.
- Implemented generic, reusable step definitions over element-action and assertion helpers, leveraging Playwright auto-waiting and web-first assertions for low flakiness; integrated failure screenshots, trace capture, Cucumber reporting, and GitHub Actions CI.

ACHIEVEMENTS & IMPACT

- Cut manual regression effort by **60%** by architecting reusable Selenium automation frameworks, freeing the team for higher-value testing.
- Boosted data-verification query performance by **40%** through Snowflake optimization, reducing pipeline run time and processing cost.
- Self-taught additional automation tooling (REST API testing, CI/CD integration) and applied it directly to live enterprise workflows.

EDUCATION

Siksha 'O' Anusandhan University

Bachelor of Technology in Computer Science and Engineering

2019 – 2023

Bhubaneswar, Odisha, India

- Relevant Coursework: Data Structures, Algorithms, Database Management, Web Technologies, Software Engineering.
